

Amendment #1
Solicitation NNC12442536Q
Automated Gas Management Panels

Since release of the RFQ, NASA GRC has determined that two corrections are needed. Please see the following corrections:

- 1) Delete the text in 4.1.4. Insert the following text in its place:
“Each gas management panel shall be able to supply an individual gas species (possibly diluted with nitrogen). For example: hydrogen fluoride and nitrogen, carbon dioxide and nitrogen, methane, water vapor, etc.”
- 2) Nothing in the text of 4.3.8 has changed. However, this sub-section has been moved and is now in the new sub-section of 4.5.7 (essentially, it moved from the electrical section to the Option 2 section).
- 3) All other aspects of the Solicitation remain unchanged.
